

THE OPEN UNIVERSITY OF SRI LANKA

BACHELOR OF SOFTWARE ENGINEERING

ACADEMIC YEAR – 2021/22

EEI3346 - WEB APPLICATIONS DEVELOPMENT

Mini Project

Student ID: S92077738

Student Name: R.G.I.T.B Jayarathne

Q1) When I was designing the front page, first of all, I make header sections, under this header tag, I put web site logo which is “CeylonTravel”.

next added nav section. it has five nav lists, which are ‘Home’, ‘infoTourist’, ‘About’, ‘Contact us’ and “To-do”. These all have separate pages.

There is a div container called "menu-btn" which I added when we reduced the screen, the nav list above and other things changed very ugly across the screen. To avoid this and represent a mobile-friendly UI I used it. When reduced at a point of width this nav list will hide and appear only this ‘menu-btn’. If we wanna show our list we need to click it also it has a close icon when appearing list close button also displays.

After this header part, I added a home section, It has landing content. First of all wanna say these every content are mobile-friendly.

The top left corner has a social media icons bar which can be used to connect with social media pages that page has. This part has video as background its play infinitely.

Under this part, there is a search bar that can be used to browse travelling places(actually it is only the design part of the page) after that appear travelling page text content and below the content, there is a button called ‘EXPLORE’ it connects with info tourist page.

The next section added some special things that can you do in Sri Lanka. It has some description of that adventure.

After that section added partner detail in the website next describe facilities that the website provides. next, have a testimonial section and I added some demo reviews, after the testimonial section there is a button for a link with the contact us page and lastly footer section.

Q2)

Main problem

- Faced several problems when creating a TO-DO page.
- When the website is set up mobile-friendly.

Sub Problem

- I had to work hard to find the photos and videos related to the website.

Q3)

How solved todo page:

When I created the to-do page for the first time, I could not store more than one value for the input. After finding the reason for that, all the values coming from the input are stored in an array.

After that our input display was with the symbol in that array. To avoid that we filtered the input text with length and put the resulting volume into the same array as before and now it does not display like a normal array.

Then take the name of the array as a parameter and pass it to the relevant function and display the input of the User.

When I arise this problem, I want to know, how to work with properly vue js. Then I search for a full course and finally, I found a good course on (https://youtu.be/0xt_Jv-P_Vo)this channel. I referred it until the end and do small projects with this course holder. After watching that I enter my problem and solved it. That's how I solved it.

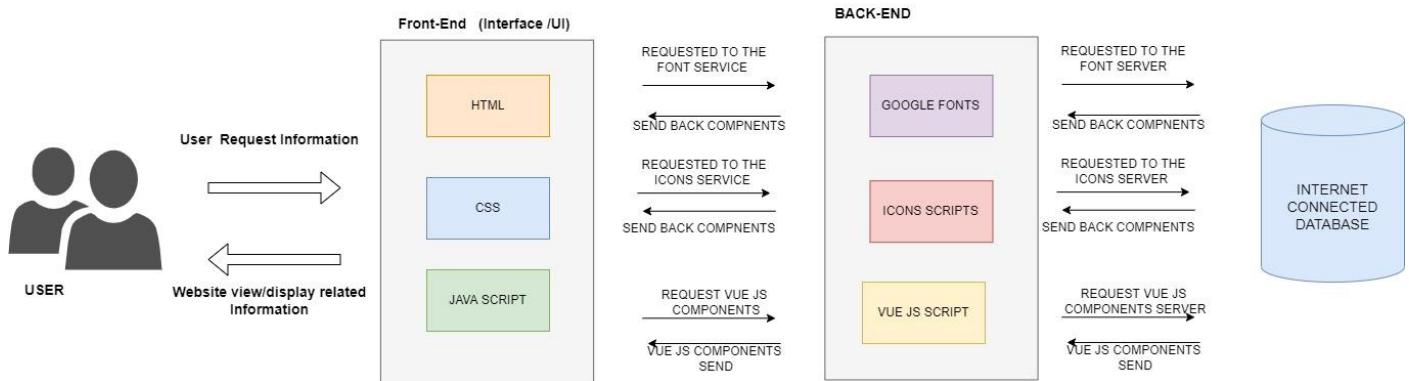

How solved the website set up mobile-friendly;

Actually, it is not a big problem but sometimes I have changed the whole code and re-wrote it. I learned some important tricks from it such as display flex property easy to handle and set up mobile-friendly rather than using other properties.

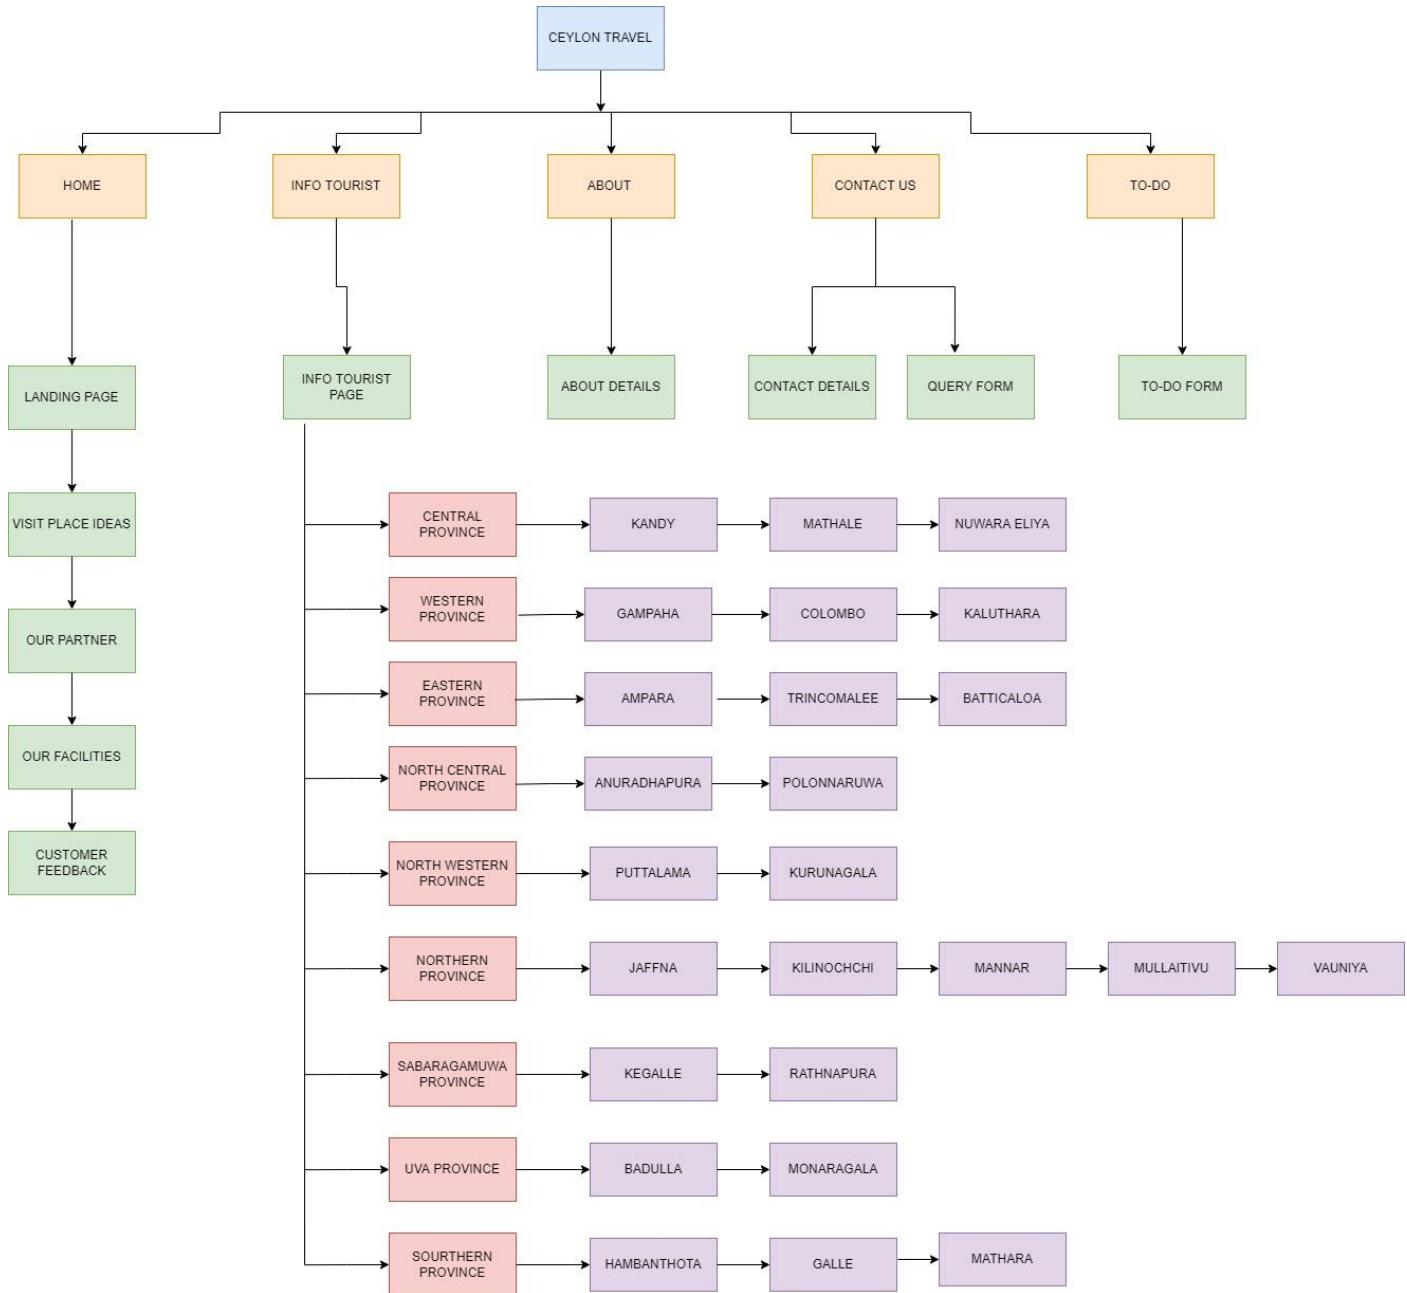

How I solved this: I had to work hard to find the photos, videos and content related to the website.

Seems like it's not a problem but it wasted plenty of time. For solved it I referred, several social media as well as referred many websites to find some valuable photos, videos and content.

Q4) Architectural diagram of the system

Q5) Site Map

Q6) Used web technologies

Used languages : HTML/ CSS/ Java Script / vue js frame work

Learning refer resources: Youtube/solo learner / w3school

Font : google font

Icons : awesome fonts / font awesome

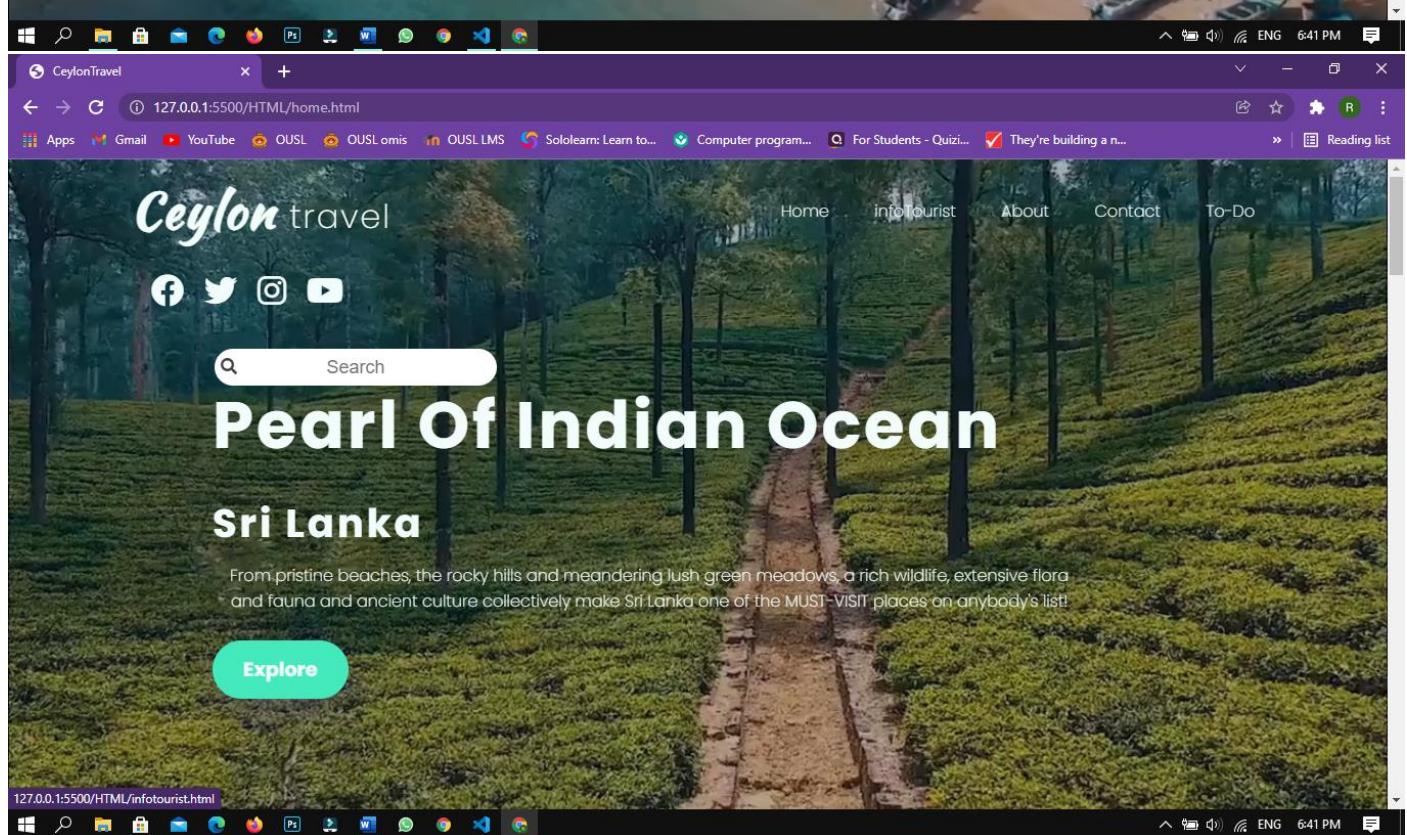

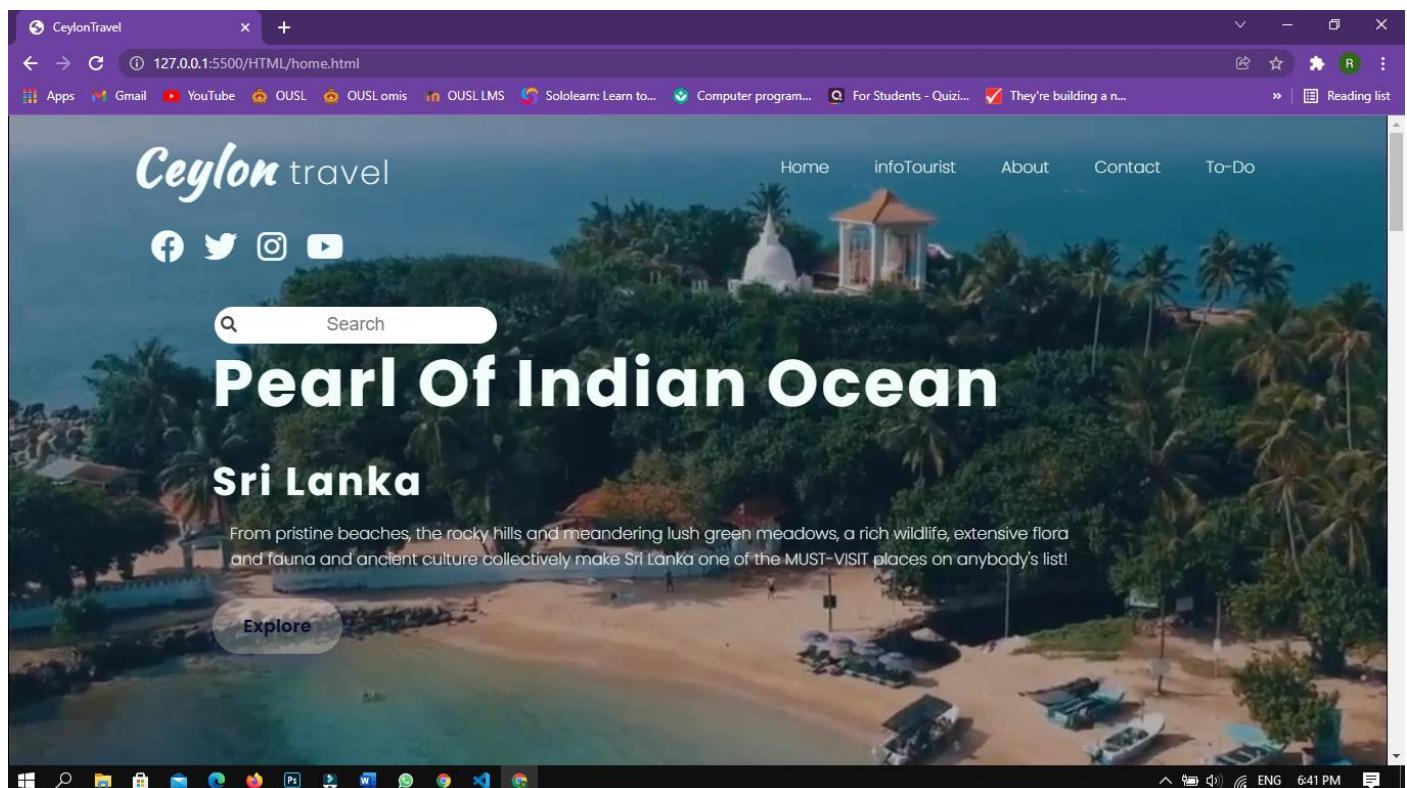

Photos & video : facebook /unplash/pixel/pixabay/adobe stock

Content text copy from : wikipedia / <https://www.srilanka.travel> / <https://traveltriangle.com/>

Q7)

Home page

It has a video background. buttons have some awesome hover effects also mobile responsive.

What You Can Do In Sri Lanka

"Jobs fill your pockets, adventures fill your soul."

Mountain Hiking

The beautiful thing about hiking is that it's truly an activity everyone can do. Whether you're young or old, an expert or an amateur, there's a trail out there that will be perfect for you.

Train Traveling

"Trains are beautiful. They take people to places they've never been, faster than they could ever go themselves. Everyone who works on trains knows they have personalities, they're like people. They have their own mysteries."

Observe Temple

"To enjoy good health, to bring true happiness to one's family, to bring peace to all, one must first discipline and control one's own mind. If a man can control his mind he can find the way to Enlightenment, and all wisdom and virtue will naturally come to him."

Beach Activity

"We walk up the beach under the stars. And when we are tired of walking, we lie flat on the sand under a bowl of stars. We feel stretched, expanded to take in their compass. They pour into us until we are filled with stars, up to the brim."

Our facilities

Now it's easier than ever to communicate with your World Travel, Inc. Travel Consultant. With Text to Travel, making changes to a reservation or connecting with your Travel Consultant while on the go is as simple as sending a text!

Booking Hotels

Whether you are travelling for business or pleasure, the luxury hotel services offered by the five star Grand Palace Hotel make it an ideal choice for your stay in Riga, Latvia. The hotel's luxurious surroundings, comfort, thoughtful touches and a personalized service sets it apart from any other hotel,

Travel Guide

Steering the way in Sri Lanka

Tourist guides provides the visitor with in depth knowledge in their mother tongue, smoothing creases and wrinkles that is bound to occur while touring a foreign country for the first time. It is best to

Conclusion

The web technology used to create this website was HTML, CSS and JAVA SCRIPT. It was also designed to be computer and mobile-friendly.

The basic structure was created using HTML and the web pages were decorated using CSS. The web page used the required function using JAVA SCRIPT.

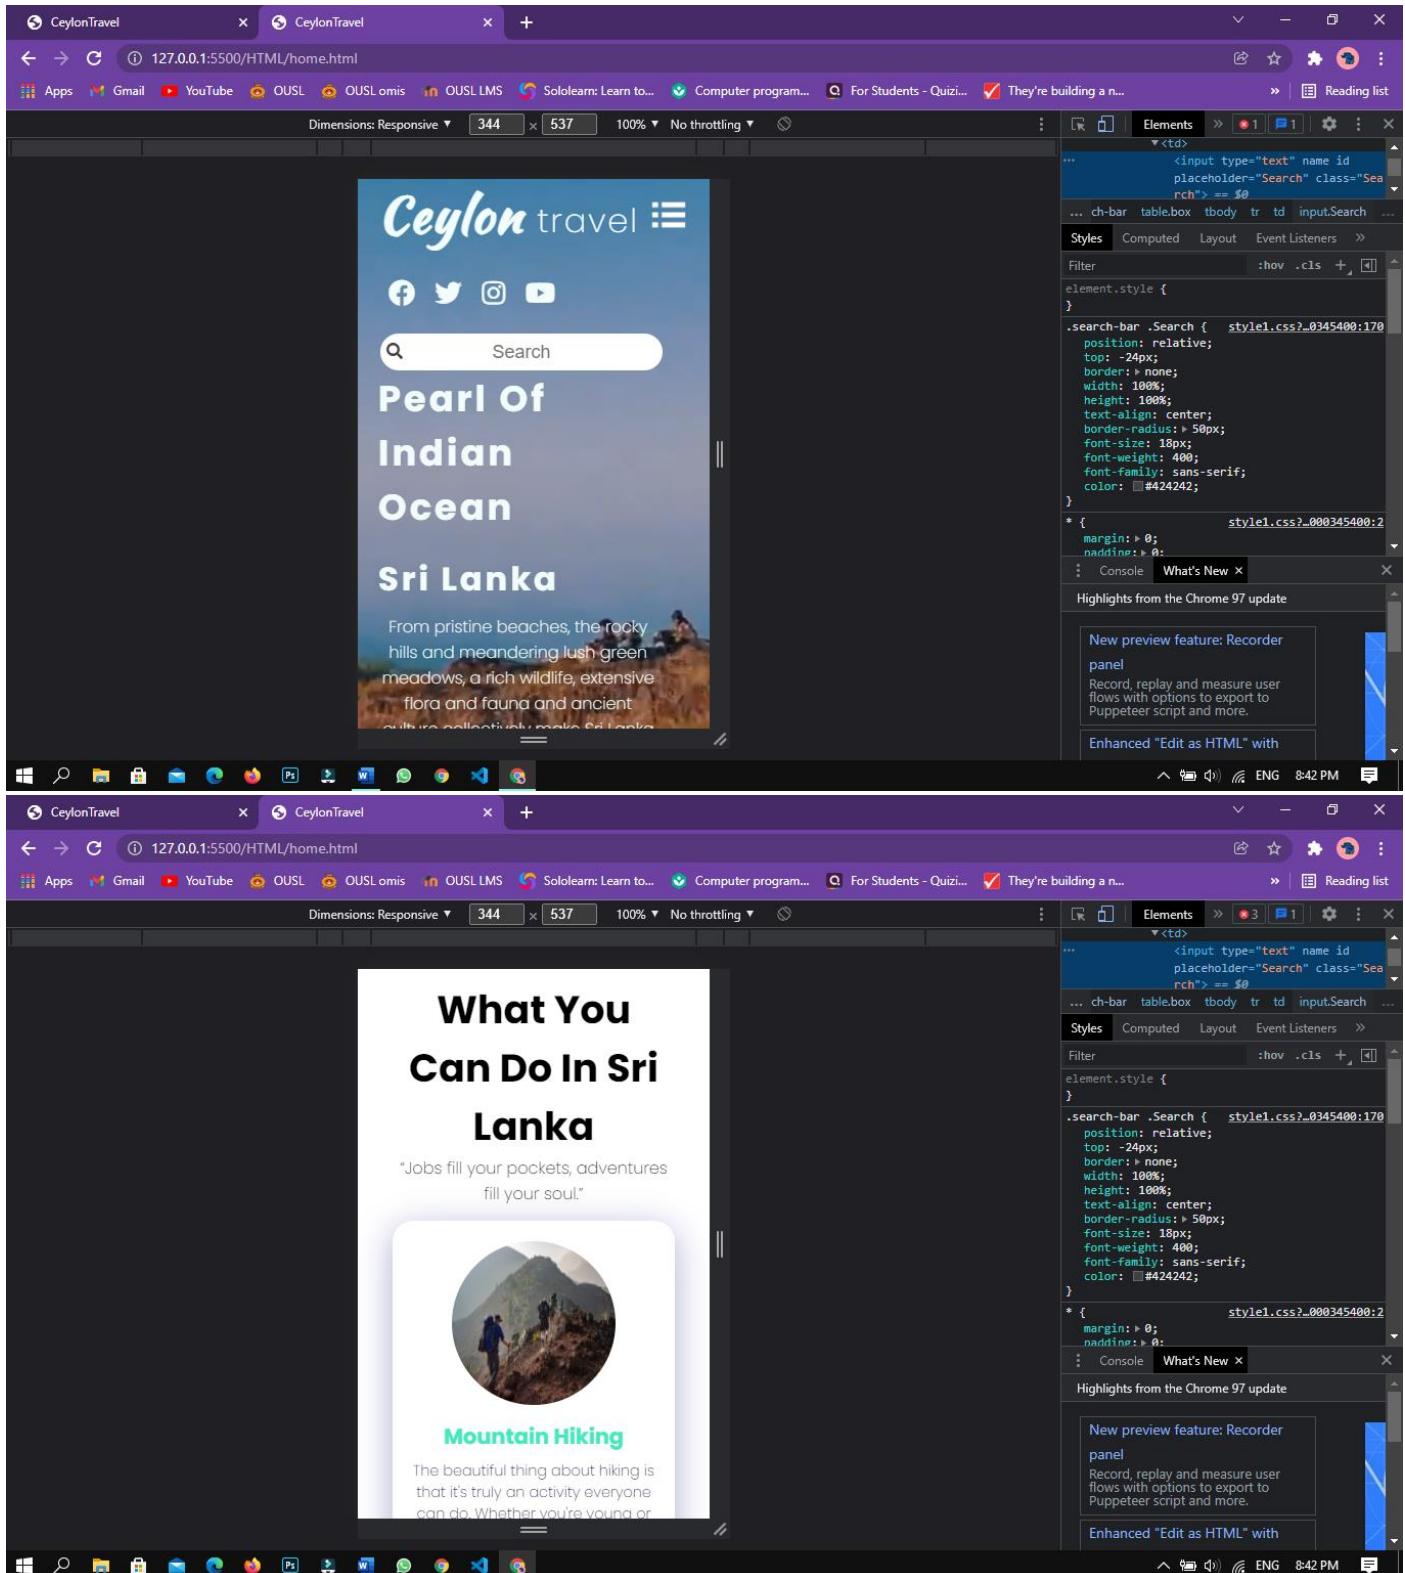

As a website that represents travel information, the priority is to highlight it. In addition, other services provided by the Website and represented external partner associated with the Website are listed.

You can use the site to make notes about the places you decide to go and make as many notes as you want. It's designed to delete a single entry, delete a number of unwanted data, and delete all data at once. That function is in a web page called TO-DO.

In the info tourist web page, you can choose the places to visit in Sri Lanka by province. Tourist places in and around all the districts in one province are listed.

There is also a forum under contact us where you can comment on how to use the website.

Some photos of mobile view;
